## **DESIGN CHOICES**

### **I. Colors**

- The main colors of my website is black and white which remind a brilliant inventor. I changed color from blue and white to black and white because I change my hero from Vladimir Putin to Steve Jobs.

### **II. Frame and layout**

1. The logo, menu, paragraph and header are placed in a position that is the same as an idea that I get from nickkolenda.com.
2. Home page:
  - I merged home page and about page in the same page named Home. This is suggestion of Ruairi. I add Slick Animation that I got from Web authoring's moodle in this page.
3. Apple page and Gallery page:
  - Use the same layout and Html/CSS code line- 2 columns for 2 products or 2 topics. This design is called Grid layout.
4. Video page, Iphone page and Ipad page:
  - I design 2 columns for each pages. The first column is video or image and the second column is description or quotation related to the first column. This design is called grid layout.
5. Life page
  - This page is full of text containing a small picture so I got an idea of designing this page from nickkolenda.com. the paragraph is in the center of the page
6. Article page
  - This page should look like a blog or news so I moved articles a little to the left rather than being in the center as Life page.
7. Image page
  - I used lightbox effect on images of this page. Lightbox effect was taken from Web authoring's moodle.
8. Footer
  - I used font awesome to add social media icons into footer.

### **III. Font**

- The website should be similar to a documentary, therefore I use Courier New font for almost text of the website excepting H1 of header and menu and Reference page.
